ONE Classics Nexus — Appraisal Sequence Diagram

Implementation Notes

- `AppraisalsController` owns appraisal create, retrieve, and update contracts.
- `appraisals` is the parent workflow table for inspection, comparables, valuation, and reporting.
- `row_version` supports optimistic concurrency for appraisal updates.
- Status history should be captured in `appraisal_status_history`.
- All errors should return `application/problem+json`.

Primary API Contracts

```
POST /api/appraisals
GET  /api/appraisals
GET  /api/appraisals/{appraisalId}
PUT  /api/appraisals/{appraisalId}
```

Primary Database Tables

```
vehicles
appraisals
appraisal_status_history
inspections
valuation_runs
appraisal_reports
```
